

H.B. 6423 seeks to:

- Eliminate the religious exemption for all public and private school students in Connecticut beginning on September 1, 2022, except those in grades 7-12 who already have an exemption on file prior to the date the bill is passed into law.
- Eliminate the religious exemption for children in child care programs.
- Eliminate the religious exemption for college students in Connecticut, except for those who already have an exemption on file prior to the date the bill is passed into law.
- **Require the Department of Public Health to release school-by-school immunization information annually.**
- **Create an oversight committee that will, among other things, interfere with the physician-patient relationship by scrutinizing medical exemptions, leading to a severe restriction on medical exemptions, as in New York and California.**

Neither bill provides any exception for special education students on IEPs or 504 plans to continue attending school so that they can receive the vital in-person services they require, as mandated by federal law.

H.B. 6423 is illegal and DO NOT PASS this legislation.

The 'state of Connecticut' will use their ability to publically announce 'vaccination' rates and scrutinizing medical information, which violates the intent of HIPPA regulations as well as other means of intimidation and coercion of towns and school districts to comply with the bureaucratic drive for more control at taxpayer expense.

The state will also use withholding of state funds or other punitive practices to manipulate towns and districts in other issues not yet defined for the purpose of state control at the expense of taxpayers.

The state is supposed to protect us, with real human biochemistry science not propose more bureaucratic creep.

The 'state' has power through granting of licensing to control medical, legal opinion as well as many other entities in the state not limited to private business. This allows the state to exert influence over any decisions contrary to the state's motive.

1st<sup>st</sup> amendment - The state cannot dictate religious doctrine, belief or practice.

4th<sup>th</sup> amendment. The state does not have the right to inject a human against their will without penalty. Right to be secure in our person is essential to democracy.

Forcible, through threat of penalty and against a person's will, penetration of the skin by an object is assault.

The opinion that 'vaccine' is the only means to achieve "safety" is false and not scientifically valid. Alternatives have been suppressed for the sole purpose of creating a narrative that promotes a pro'vaccine' only media zone.

The vaccine manufacturers documentation states, will not prevent infection.

US Code All the current 'vaccines' are experimental and trials are not complete until 2023 and therefore can't be made mandatory.

UNESCO Universal Declaration on Bioethics and Human Rights 2005 signed by the United States prevents forced procedures on human beings.
